

1. What are 3 HTML elements not mentioned in the videos this week? What do they do and how are they used?

Three HTML elements that were not mentioned in the videos this week are `<main>`, ``, and `<select>`. The `<main>` HTML tag is used to define the main content of a document. The `` tag is used to put emphasis on text. This is used if you want to italicize words. The `<select>` HTML tag is used to create drop-down menus.

2. Choose one of your favorite websites and identify 5 different HTML elements used on the website. Make sure to include the URL in your submission.

For my favorite website, I chose [instagram.com](https://www.instagram.com/). The five different HTML elements that I can identify on this website are `<body>`, `<script>`, `<div>`, `<head>`, and ``. The URL for this site is: <https://instagram.com/>
